

Tackling TRANSFER

We tracked **720,000** community college students who started in the fall of 2007 in pursuit of a college credential

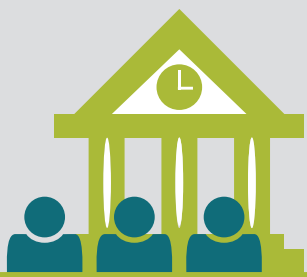

Only 100,000 earned a bachelor's after 6 years

Too few students managed to make the leap

Just **33%** of students who started community college in fall of 2007 transferred to a four-year school

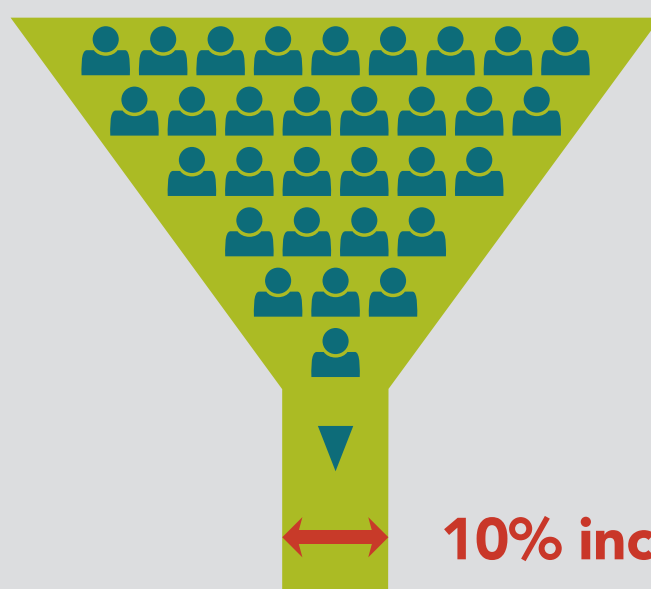

Even when they transfer, we're still failing them

Of the students who successfully transferred, **only 42%** went on to get a bachelor's within 6 years of starting

If we increased the transfer rate among all new students at community colleges by **10 percentage** points, there could be about **70,000 more** students earning bachelor's degrees **EVERY YEAR.**

1.7 million students start community college each year

70,000 additional bachelor's degrees

Increasing the transfer rate is a job for both two- and four-year colleges. Download "The Transfer Playbook," a detailed guide for two- and four-year colleges to help more students transfer and earn a bachelor's degree.
